WebTADS Will Modernize NASA Langley Time and Attendance Reporting

As part of NASA Langley Research Center's Integrated Financial Management Program (IFMP), this summer, LaRC employees will be introduced to a new Web-based system for reporting their time and attendance information. This new system will replace the current "TADS" and "Carolyn Thomas" systems in use today. WebTADS (Web-based Time and Attendance Distribution System), as the new system is called, offers a simplified, user friendly Web browser interface that allows civil service employees the ability to enter time and attendance information, and provides for submittal of the time and attendance data for payroll and labor processing.

The phased rollout at LaRC is scheduled to begin in July and conclude in September. Organizations will be notified about the rollout schedule as July approaches. WebTADS is a government off-the-shelf (GOTS) application developed at Marshall Space Flight Center (MSFC) and will be implemented at five NASA centers. For further information please contact Carmen Torres-Nisbet at 4-6332 (e-mail: C.O.Torres-Nisbet@LaRC.NASA.GOV) or Yvonne Dellapenta at 4-2760 (e-mail: Y.M.Dellapenta@LaRC.NASA.GOV).
